Policies When Illness Occur

Health Check

Our center requires that we protect the health and safety of all children who participate in our program. Therefore all children are visually observed and checked for problems that may be harmful to themselves or others. Visual observations may include any or all of the following symptoms or potential problems.

If your child has the following symptoms:

1. Fever - (oral) – 100 or above
   - (rectal) – 101 or above
2. Severe coughing
3. Unusual skin rash
4. Bleeding
5. Open wounds
6. Injuries, bruises, lumps or broken bones
7. Untreated scabies, head lice or the presence of nits: may return after treatment and removal of nits.
8. Vomiting
9. Pink eye: until on antibiotics for 24 hours
10. Sore throat
11. Ringworm
12. Diarrhea
13. Impetigo: may return 24 hours after treatment is initiated
14. Other health problems

Keep him/her at home until symptoms disappear or your physician decides he/she can return to the center without danger to themselves or someone else.

If your child becomes ill during the day, he/she shall be separated from other children, supervised, and you will be notified to pick up your child. If no one can be reached, your child will be cared for until you come.

We know this can be an encumbrance for you, but it is for your child’ benefit and necessary for the protection of all the other children and staff
